**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Berggren at al.

The reference discusses substantial magnetic coupling between control and qubit chips (page 122, first sentence under "Experiment"), as well as mutual inductance. If there is mutual inductance, then the magnetic field will induce current flow, so this would be a means for applying currents. And if currents are induced to flow, then any resistance will be associated with voltage drops, so voltages would be applied as well. Any interaction would be the performance of an operation on the qubit. So claim 1 is anticipated.

***Allowable Subject Matter***

Claims 53-65 are allowed.
